# CE in Five Slides

## *Model Training*

### **Objective:**

$$\min_{\theta} \{ \text{yloss}(M_{\theta}(\mathbf{x}), \mathbf{y}) \}$$

# CE in Five Slides

## *Model Training*

### **Objective:**

$$\min_{\theta} \{ \text{yloss}(M_{\theta}(\mathbf{x}), \mathbf{y}) \}$$

### **Solution:**

$$\begin{aligned}\theta_{t+1} &= \theta_t - \nabla_{\theta} \{ \text{yloss}(M_{\theta}(\mathbf{x}), \mathbf{y}) \} \\ \theta^* &= \theta_T\end{aligned}$$

# CE in Five Slides

# CE in Five Slides

*Counterfactual Search*

**Objective:**

$$\min_{\mathbf{x}} \{yloss(M_{\theta^*}(\mathbf{x}), \mathbf{y}^+)\}$$

# CE in Five Slides

*Counterfactual Search*

**Objective:**

$$\min_{\mathbf{x}} \{y\text{loss}(M_{\theta^*}(\mathbf{x}), \mathbf{y}^+)\}$$

**Solution:**

$$\begin{aligned}\mathbf{x}_{t+1} &= \mathbf{x}_t - \nabla_{\theta} \{y\text{loss}(M_{\theta^*}(\mathbf{x}), \mathbf{y}^+)\} \\ \mathbf{x}^* &= \mathbf{x}_T\end{aligned}$$

# CE in Five Slides

$$\min_{\mathbf{Z}' \in \mathcal{Z}^L} \{\text{yloss}(M_\theta(f(\mathbf{Z}')), \mathbf{y}^+) + \lambda \text{cost}(f(\mathbf{Z}'))\}$$

**Counterfactual Explanations** explain how inputs into a model need to change for it to produce different outputs<sup>1</sup>.

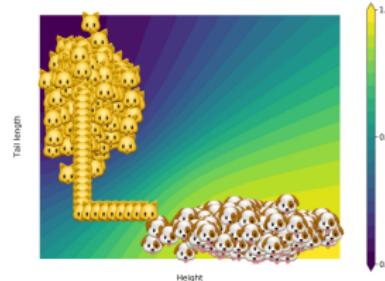

Figure 4: Counterfactual explanation for what it takes to be a dog.

---

# Algorithmic Recourse

Provided CE is valid, plausible and actionable, it can be used to provide recourse to individuals negatively affected by models.

*"If your income had been X,  
then ... "*

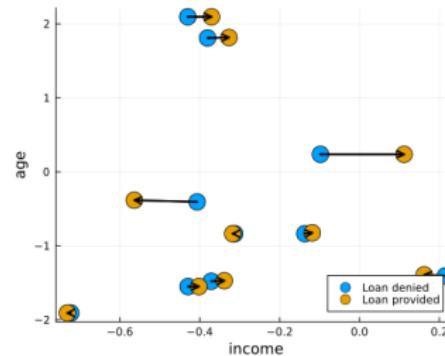

Figure 5: Counterfactuals for random samples from the Give Me Some Credit dataset (Kaggle 2011). Features 'age' and 'income' are shown.

## Dynamics of CE and AR

# Hidden Cost of Implausibility

AR can introduce costly dynamics<sup>2</sup>

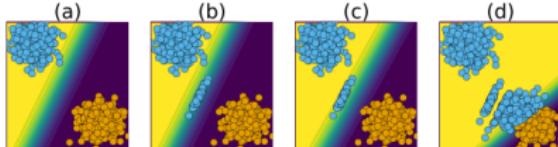

Figure 6: Endogenous Macrodynamics in Algorithmic Recourse.

Figure 7: Illustration of external cost of individual recourse.

**🔑 Insight:** individual recourse neglects bigger picture.

<sup>2</sup>■

Altmeyer, Angela, et al. (2023) © SaTML 2023.

# Mitigation Strategies

- Incorporate hidden cost in reframed objective.
- Reducing hidden cost is equivalent to ensuring plausibility.

$$\begin{aligned}\mathbf{s}' = \arg \min_{\mathbf{s}' \in \mathcal{S}} & \{y\text{loss}(M(f(\mathbf{s}')), y^*) \\ & + \lambda_1 \text{cost}(f(\mathbf{s}')) + \lambda_2 \text{extcost}(f(\mathbf{s}'))\}\end{aligned}$$

# Plausibility at all cost?

# Pick your Poison

All of these counterfactuals are valid explanations for the model's prediction.

*Which one would you pick?*

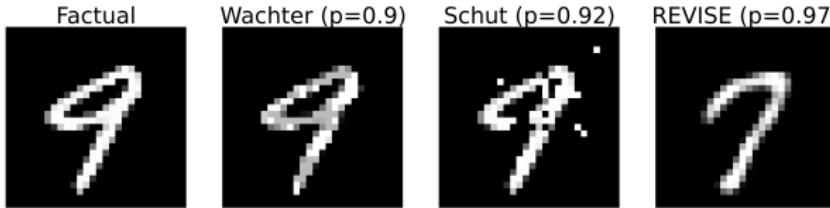

Figure 8: Turning a 9 into a 7: Counterfactual explanations for an image classifier produced using *Wachter* (Wachter, Mittelstadt, and Russell 2017), *Schut* (Schut et al. 2021) and *REVISE* (Joshi et al. 2019).

# Faithful First, Plausible Second

Counterfactuals as plausible as the model permits<sup>3</sup>.

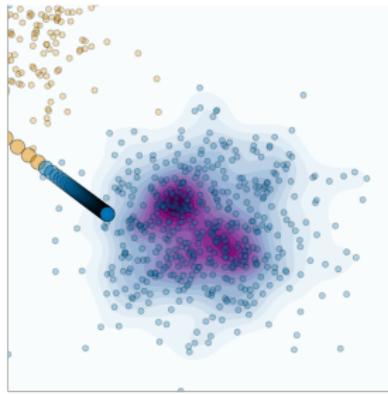

Figure 9: KDE for training data.

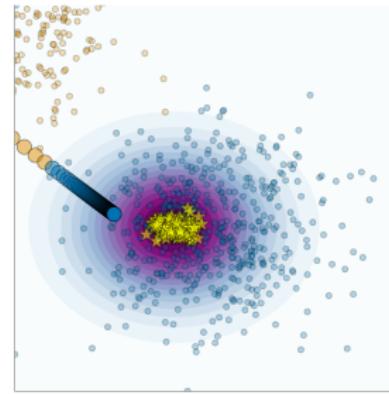

Figure 10: KDE for model posterior.

<sup>3</sup>■

# Faithful Counterfactuals

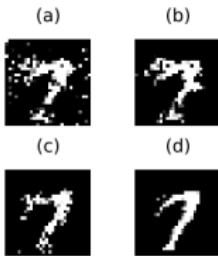

Figure 11: Turning a 9 into a 7. *ECCCo* applied to MLP (a), Ensemble (b), JEM (c), JEM Ensemble (d).

🔑 **Insight:** faithfulness facilitates

- model quality checks (Figure 11).
- state-of-the-art plausibility (Figure 12).

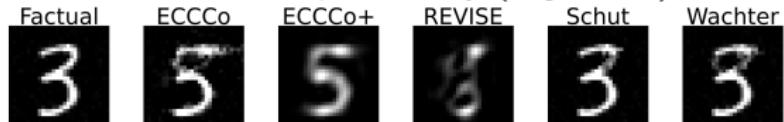

Figure 12: Results for different generators (from 3 to 5).

## Teaching models plausible explanations

# Counterfactual Training: Method

Let the model compare its own explanations to plausible ones<sup>4</sup>.

- 1 Contrast faithful counterfactuals with data.
- 2 Use nascent CE as adversarial examples.

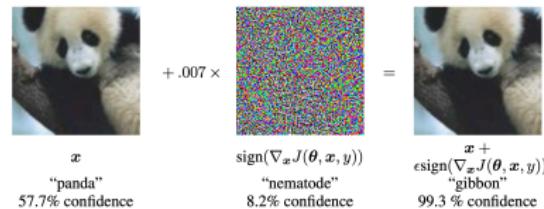

Figure 13: Example of an adversarial attack. Source: Goodfellow, Shlens, and Szegedy (2015)

<sup>4</sup> under review

# Counterfactual Training: Results

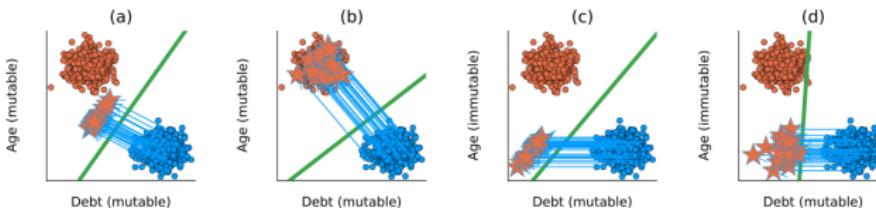

Figure 14: (a) conventional training, all mutable; (b) CT, all mutable; (c) conventional, age immutable; (d) CT, age immutable.

- Models trained with CT learn more plausible and (provably) actionable explanations.
- Predictive performance does not suffer, robust performance improves.
