Holding Models Accountable

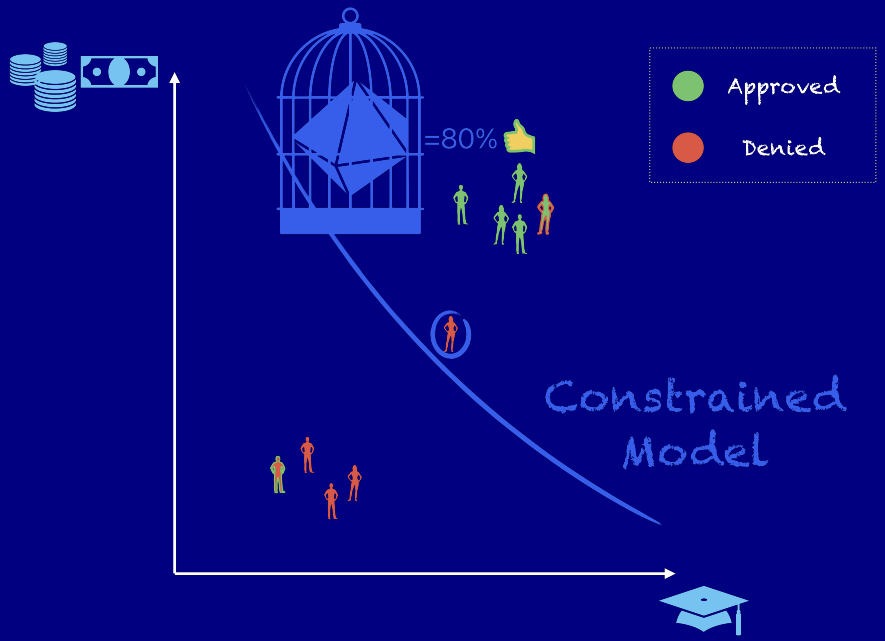

Figure 11: A model trained to use plausible explanations for predictions. IEEE SaTML 2026

‘ok but agi bruh’

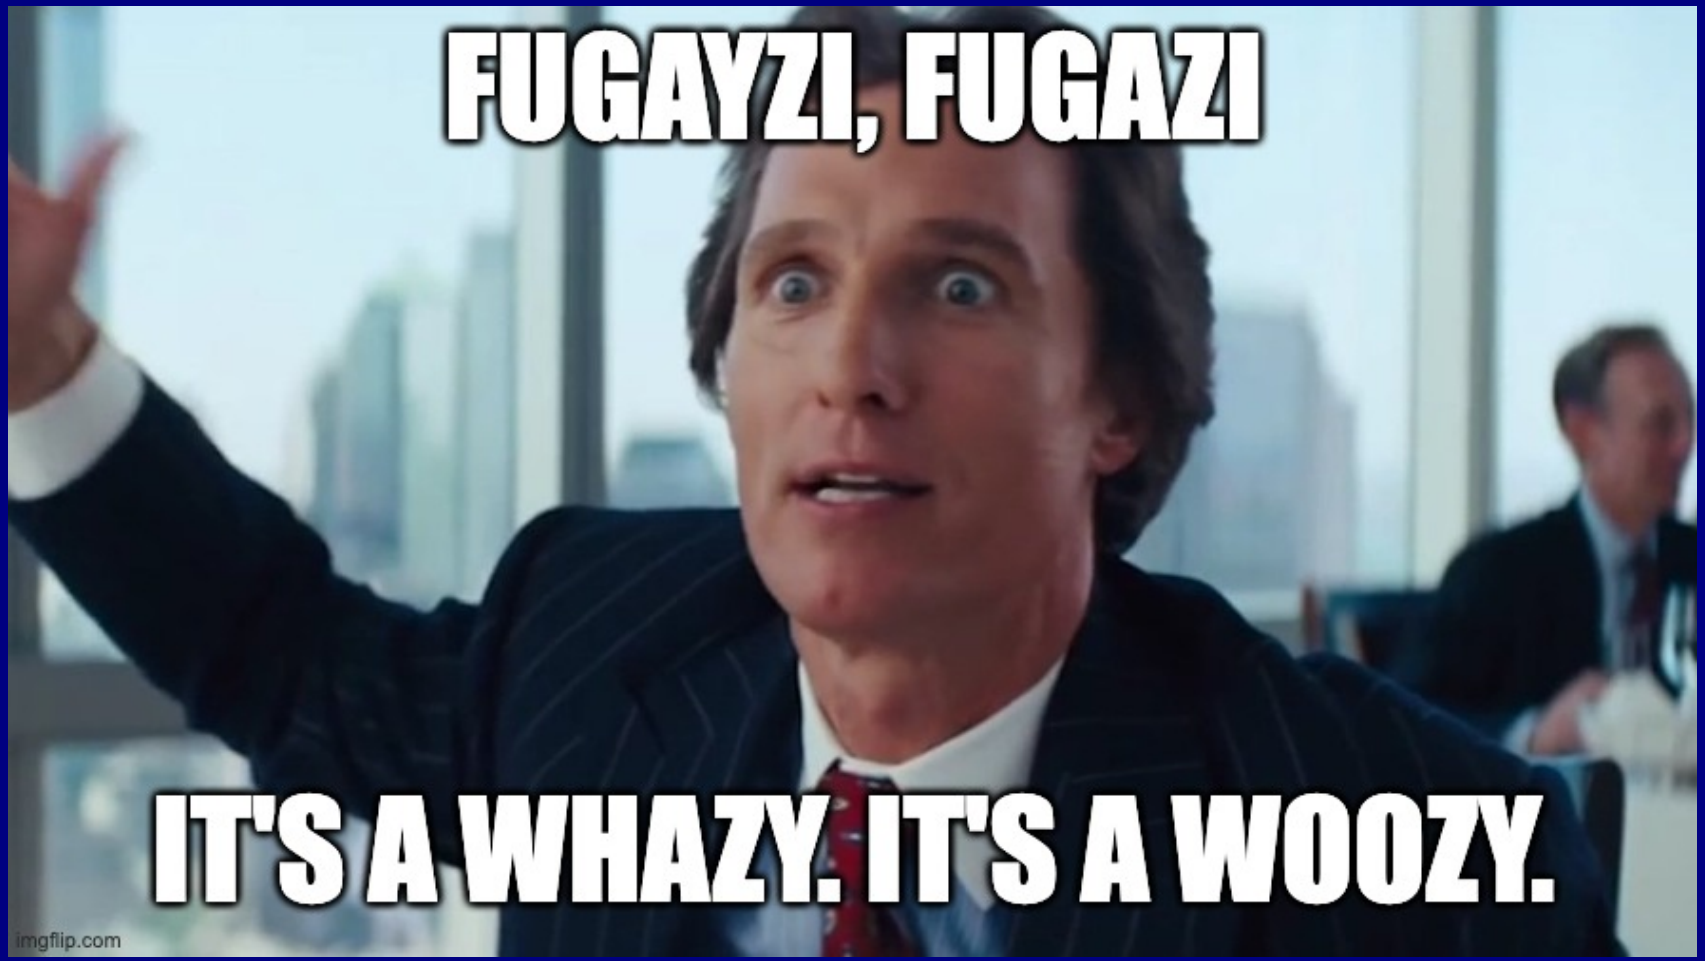

Figure 12: My personal take on “AGI by 2027”. ICML 2024

In all seriousness ...

- Useful? Absolutely

In all seriousness ...

- Useful? Absolutely
- AGI? Sentient? Conscious? No: 'emergence' in complex systems does not hint at any of this

In all seriousness ...

- Emergence broadly described as broad behaviour of complex systems that's different from its constituent parts:

In all seriousness ...

- Emergence broadly described as broad behaviour of complex systems that's different from its constituent parts:
  - Example 1: asset price bubbles in financial markets -> locally predictable, rational behaviour, but also market failure

In all seriousness ...

- Emergence broadly described as broad behaviour of complex systems that's different from its constituent parts:
  - Example 1: asset price bubbles in financial markets -> locally predictable, rational behaviour, but also market failure
  - Example 2: tornado -> just dust and debris, but also a possible disaster

In all seriousness ...

- Emergence broadly described as broad behaviour of complex systems that's different from its constituent parts:
  - Example 1: asset price bubbles in financial markets -> locally predictable, rational behaviour, but also market failure
  - Example 2: tornado -> just dust and debris, but also a possible disaster
- Does it matter?
